

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

whether this Creature was endow'd with a humane Soul; and if not, what became of the Soul of the Embryo, that was five months old.

A little after, another Monster was produced, which was an Infant come to maturity, having instead of a Head and Brains, a Mass of flesh like any Liver; and was found to move. And this *Fetus* occasioned a Question for the *Cartesians*, how the motion could be performed, and yet the *Glandula pinealis*, or *Conarium* be wanting; nor any Nerves visible, which come from the Brain? The marrow in the *Spine* was of the same substance. It liv'd four days, and then dyed: It was anotomized by *M. Emmerez* in presence of the Assembly.

There came a Letter from *Florence*, Written by *M. Steno*, which has also somewhat perplexed the followers of *Des Cartes*. A Tortoise had its head cut off, and yet was found to move its foot three days after. Here was no Communication with the *Conarium*. As this seems to have given a sore blow to the *Cartesian* Doctrine, so the Disciples thereof are here endeavouring to heal the Wound.

An Account of two Monstrous Births, not long since produced in Devonshire; communicated by M. Colepreffe.

1. One *Robert Cloak* a Joyner (whom I know) of *Clamick* in the Parish of *Beer-Ferris* in *Devonshire*, had on *Febr. 24.* last, a Monstrous black Ram-Lamb fallen with one Head, but two distinct Bodies, with eight Legs; which Bodies were joyned in the Neck: It had two Eyes, and as many Ears, in the usual places; and one extraordinary Eye in the Niddock, with one single Ear, about an inch distant from the Eye backwards: Its Dame, which was *White*, usually brought forth two Lambs every year, as she did this year also a *White* one, which with the Ewe remains alive. But whether this Monster was produc'd dead or alive, is not known, it being found dead by the hedge, and soon after put into the Earth. There were ten *White* Ews accompanied with three *White* Rams.

2. One *John Cauce*, Servant to *Mr. William Knighton* of *Lockridge*, likewise in *Beer Ferris*; had among his Sheep, on the seventeenth of *Febr.* last, a *White* Lamb fallen on a Common in the said Parish, with two distinct heads and Necks, Joyned at the Shoulders

shoulders, but one only Body, and that well form'd, yet having double entrals in all respects. The Ewe remains well. The Monster dyed, and is now in my Custody, after it hath been dried in an Oven, and By the Sun.

Some Observations made in Mines, and at Sea, occasioning a Conjecture about the Origine of Wind: Imparted by the same Mr. C.

One *John Gill*, a Man well experienced in Mineral affairs, discoursing with me about the Wind and its Origine; declared to me his thoughts concerning the same, as a result of twenty years Experience and Observations of his own.

First, He affirmed, that if in digging deep under ground, the Work-men meet with Water, they never want Air or Wind; but if they misse Water (as sometimes it happens, even at 12 or 16 Fathoms depth) they are destitute of convenient Air, either to breathe in, or to make their Candles burn.

Next, When (as usual) there happens to be a great quantity of a Winters standing water, in a deep Mine, they commonly bring, or drive up an *Adit* for drawing away such water: But as soon as that part of the Level is made, that any of the standing Water begins to run away, the Men must secure themselves, as well as they can, from danger of being dash'd in pieces against the sides of the *Adit*: For the included Air or Wind in the standing Water, breaks forth with such a terrible noyse, as *that* of a Peece of Ordnance, and with that violence, as to carry all before it, loosening the very Rocks, though at some distance in the Work or *Adit*.

Thirdly, he hath observed on several occasions, going to and fro, between *London* and *Plimouth*, by Sea, that being in a Calm, that way, which the Sea began to Loom or move, the next day the Wind was sure to blow from that point of the Compass, towards which the Sea did Loom the day before.

An Account of Hail-Stones of an unusual bigness, Communicated by D. Nath. Fairfax, with his Reflections on them.

This Account came but very lately to hand, though the thing hapned a while agoe; the Ingenious Author thereof, having but newly entred into a Philosophical Correspondence with the Publisher.

July, 17. 1666. About 10 in the Fore-noon, there fell a violent
